The growth, stability and resilience of Islamic finance is now a well established fact. However, in order to achieve sustainable growth the Islamic finance industry has to be able to maintain its competitive edge by generating higher efficiency and performance.

The studies in this volume aim at providing empirical and comparative perspectives on the performance and efficiency of the Islamic finance industry through a number of econometric models, with a specific focus on the GCC countries supported by comparative cases.

This volume is based on a workshop held at the Gulf Research Meeting organized by the Gulf Research Center Cambridge in summer 2012.
